MATTRESS FILLINGS

Materials	Environmental Benefits
Topaz	Made using recycled clothes and rags, ensuring circular economy benefits and avoiding landfill
Rebound	Contains recycled polyester from plastic bottles (based on a 90cm x 190cm single mattress, 64 bottles avoid landfill and ensure circular economy benefits)
Ultrafirm Polyester	A foam replacement product. Contains recycled polyester from plastic bottles

Responsibly manufactured to go beyond basic social and environmental regulations and to meet the highest standards in our supply chain expected by our customers and the companies we work with. Certified and regularly audited by the National Bed Federation (NBF) and meet ISO 9001 and ISO 14001 standards. The NBF expects and requires social responsibility, flammability testing, cleanliness of fillings, trade Descriptions, Chemicals - REACH, BIOCIDES, POP's, UKTR and textile fibre content regulations compliance.

IMO Wheelmark approved

Approved to supply products in compliance with the Marine Equipment Directive.

Black Ensign approved

Approved to supply products in compliance with the Merchant Shipping Regulations.

Bespoke solutions

All products can be tailor made to your customers' exact requirements. Bespoke sizing available.

UK Manufacturing

Ranges designed and skillfully handcrafted in the UK, all tested to applicable standards.

End-to-end service

Major project delivery service from new-build and refurbishment projects - you're in good hands.

Own spring manufacturing

Manufacturing of own pocket spring units so we're not beholden to outside suppliers.

Sustainability

Strong environmental credentials (ISO 14001) working towards all products being 100% recyclable.

Quick delivery lead times

Always ask if you need delivery by a specific date to secure orders. All delivered on Mattison vehicles.

**ISO 14001
REGISTERED**

ISO 14001:2015-certified manufacturer and have systems and controls in place to monitor environmental impacts and to make practical recommendations and improvements to reduce the impact of their business on the environment. This environmental policy includes a range of objectives we endeavour to meet or exceed in our efforts to improve our sustainable business practices.

Minimising our usage of
PLASTIC
& cardboard

One of the most fundamental and prevalent impacts on the environment any manufacturer of goods will produce is product packaging. It isn't – in and of itself – a bad thing – designed to protect the product during transport, but does certainly have an environmental impact. We've made efforts – and investments – to ensure that the product packaging we use is fully recyclable. In addition to ensuring it's recyclable, we've also invested in skills and equipment to use minimal amounts of packaging materials.

We utilise our own on-site warehousing and supplier warehousing for quick call off and delivery of critical components. Where possible, we group deliveries or collect on our own returning vehicles to reduce environmental impact and cost; moreover, we make a conscious effort to acquire new delivery vehicles every 5 years – which ensures we're running an efficient fleet (Euro 6).
